PROJECT NAME - Movies review sentiment analysis app

PROJECT DESCRIPTION - This project determines the sentiment of the feedback given in the form of words or sentences. The output is either positive or negative based on the user's input and has a user-friendly interface.

PROJECT OBJECTIVE - The main objective of my project is to divide reviews given to a movie as positive or negative. However, the use of my project is not limited to movies. We can use it for products, food, electronics, etc. Using AI, my project can give output based on large data which reduces human efforts. Hence, this can be useful in multinational companies or small startups for increased profits after analyzing the sentiment of reviews and working accordingly.

SCREENSHOTS -

MOVIE REVIEW SENTIMENT PREDICTION APP
